

Tersano IClean Mini Swab Test Fresh Prawns

Swabbing a fresh prawn

Before SAO applied: – 702,653 RLU's

After 1 spray of SAO applied: – just 7,848 RLU's

Researchers in Singapore have found that the Covid-19 virus can survive for weeks on fresh and chilled foods.

While the Kikkoman Lumitester cannot test for specific viruses, its swab test for total bacterial count on a surface is considered to be the most accurate available. We swabbed a prawn and tested it – unbelievably it read 702,653 RLU (bacterial counts).

After one quick spray of Tersano's Ozonated Water from the IClean Mini, the swab test read just 7,848 RLU's. This verifies why it's very important to wash all of our foods with Tersano Ozonated Water before we eat them.
